

Tigris Data, Inc.

August 12, 2026

To whom it may concern,

I am writing to recognize the security research contributions of **Eqan Hanif**.

Eqan recently discovered and responsibly disclosed two content-injection issues affecting the member invitation emails sent by Tigris Data: an HTML injection issue where markup placed in an organization's name could render in the email body, and a related hyperlink injection issue where URL-shaped organization and team names could appear as links in those emails. Both reports were genuine and actionable, both issues were confirmed by our engineering team, and fixes for both have been deployed to production.

Throughout the process, Eqan acted professionally: he reported the issues privately, followed up constructively, and coordinated publication with us after remediation. We are grateful for his contribution to the security of our platform.

Sincerely,

Ovais Tariq
Co-founder & CEO
